***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 8, 11, and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over *Lemelson (5,845,646)*.

As to **claim 8**, Lemelson discloses a system and method for treating select tissue in a living being, comprising:

a probe body (fig. 11) having a window (91, fig. 11) oriented toward a sample;  
a sampling beam (92, fig. 11) that may carry Raman (col. 1, lines 15-20) wavelengths through the window for analysis ;  
a conduit (95, fig. 11) carrying a fluid to the surface of the window; and  
a structure (94, fig. 11) operative to flood the window with fluid (col. 14, lines 12-20 and lines 50-60). The embodiment of figure 11 uses visible light or laser energy, however as disclosed in col. 8, lines 55-60 it is well known to use Raman wavelengths. It would have been obvious to one having ordinary skill in the art at the time of invention to use Raman wavelengths because certain body constituents produce distinguishable Raman spectra when illuminated with the proper wavelength and to analyze and detect or diagnose the tissue and to distinguish plaque deposits from healthy tissue at the walls of blood vessels.

As to **claim 11**, Lemelson discloses everything claimed, as applied above, in addition the fluid is a liquid (col. 14, lines 20-23).

As to **claim 13**, Lemelson discloses everything claimed, as applied above, in addition fluid would inherently enter the sample after flooding the window since the scope is inside the body.

Claims 10 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over *Lemelson (5,845,646)* in view of *Alfano et al. (5,261,410)*.

As to **claims 10 and 12**, Lemelson discloses everything claimed, as applied above, with the exception of the liquid being a solvent or a gas, however to do so is well known as taught by Alfano. Alfano discloses an endoscope used to determine if a tissue is malignant that includes a liquid, gas, or solvent as the fluid (col. 11, lines 35-40). It would have been obvious to one having ordinary skill in the art at the time of invention use a solvent or gas to dissolve contaminants on the window.

***Allowable Subject Matter***

Claims 1-2 and 4-7 are allowable over the prior art of record.

Claim 9 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: the prior art of record, taken alone or in combination, fails to disclose or render obvious part of the fluid passing through an aperture to ensure that the sample does not reach the window.

***Response to Arguments***

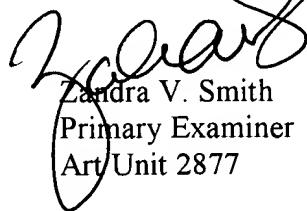

Applicant's arguments filed 06 November 2003 have been fully considered but they are not persuasive. Applicant argues that Lemelson does not provide the use of Raman in a diagnostic mode, however as disclosed in col. 10, lines 55-60 a Raman diagnostic mode is provided where the light is reflected back to a fiber inside the catheter for wavelength collection.
